

RIZON—YOUR NEW SHOOTING COMPANION

CURRENTLY IN BETA

Rizon is the easiest way to get access to precise Golden Hour data in the palm of your hand—anywhere in the world. Find the best time to take photos outdoors with your new shooting companion.

Golden Hour (a.k.a Magic Hour) is the period when the sun is at a low angle, reducing the intensity of light. The sky appears golden and shadows are longer and softer—perfect for outdoor portraiture or landscape photography and filmmaking.

With Rizon, it's easy to figure out when Golden Hour is approaching, no matter where you are in the world. You can also find out when other segments of light occur such as Daylight, Sunrise, Sunset, Twilight or Moonlight—great for those starry night photos and timelapses.

FEATURE DETAILS

Glance at Rizon's 24-hour clock to get an idea of when the light is best. Find out when each segment of light will occur by rotating the clock face.

Look at the week ahead and plan the perfect time to get snapping by setting a one-off reminder. Give yourself that extra piece of mind when planning your shoots.

Never forget when Golden Hour is approaching, no matter where you are, with Rizon's Automatic Alerts. Fine tune the threshold of when to be reminded so you're always ready to shoot.

Planning a trip out of town and want to know when Golden Hour will happen? Add a custom location and have access to that location offline—great for when you have no data abroad.
